

BAYAN PALACE - KUWAIT

Bayan Palace is justifiably regarded as one of Kuwait's finest architectural masterpieces and covers 1,399,500 square meters. It was officially opened in 1986 for the Fifth Conference of the Arab League and is the main location for international conferences in Kuwait.

THE REQUIREMENT

The Conference Hall required a full conferencing solution to allow for multi-language translation, fixed delegate units with LCD display screen for messages and that were in-keeping with the environment. Also 12 language translation booths and 1,500 listening posts for the translation of the meeting into the tiered seating. The meetings are to be webcasted, televissed and displayed on large screen monitors around the hall.

THE SOLUTION

Auditel's Ambassador Discussion System was the best option for this project. The Ambassador system met all of the Palaces needs by having a broadcast quality microphone, with ring illuminant, inbuilt loudspeaker, LCD display, as well as the headphone jack and language selector for the 12 channel translation.

Auditel designed & built a bespoke unit made of polished solid brass which when installed into the desk matched the design & look of the palace. The Ambassador system is a hard wired system which offers maximum reliability & security especially with translation.

Auditel installed its Audicam system to cover all of the floor and to automatically PTZ to the live microphone. This footage was displayed on two 4m wide LED screens, webcasted and televised.

For the tiered seating around the conference hall, we designed, manufactured and installed 1,500 listening posts, these posts were designed to fit into the seat arms of the chairs and offered all 12 languages to choose from as well as a headphone socket and volume adjuster.

Initial Use Case

- Full conferencing solution to allow for multi-language translation
- 1,500 listening posts

Installation

- Ambassador Discussion System
- Broadcast quality microphone
- LCD display & language selector

Deployment

- Deploy Auditel Customisation solution in the conference hall
- Further deployment of webcasting customisation
